SUMMARY

Hey! I'm a CSIT student who's really into web development and using tech to solve real-life problems. I enjoy building clean, simple, and user-friendly websites, and I've worked on projects like Kala Ghar, which connects handicraft teachers and learners, Choto job, platform where the unemployed people gets job with the goverment approval and Sajilo Wear, a platform where people can rent or lend clothes to each other. I love learning new things, experimenting with different ideas, and turning concepts into something useful. Outside of coding, I enjoy exploring new places and cultures it keeps me inspired and helps me see things differently when I design or develop.

SKILLS

- HTML - Skillful
- CSS - Skillful
- Javascript - Beginner
- Php - Beginner
- Python - Skillful
- Basics of C# And ASP.NETCORE - Beginner

EDUCATION

Bachelors in Information Technology (CSIT)

new summit college / Kathmandu / January, 2023 - Present

Currently pursuing my Bachelor's in CSIT, where I'm learning about software development, programming, web technologies, and data structures. I've worked on real-world projects like Kala Ghar, connecting handicraft teachers and students, and Sajilo Wear, a platform for renting clothes. I'm especially passionate about building practical web solutions and exploring the latest in tech.

TRAINING/CERTIFICATION

Python Bootcamp Certificate

Python Users Group Nepal / 2023

Completed an intensive Python programming bootcamp focused on core concepts, data structures, and real-world applications. Gained hands-on experience through coding exercises and projects.

TechTrix 2023 – Organizer & Core Team Member

TechTrix / 2023

Served as an organizer and core team member in TechTrix 2023. Played a key role in event planning, coordination, and execution of technical workshops and sessions.

PROJECTS

Kala Ghar

Led the development of a web-based platform aimed at connecting handicraft teachers and learners. Focused on creating a user-friendly interface, efficient content sharing, and real-time interaction features to promote traditional art skills.

choto job

Developed Choto Job, an e-governance web platform that connects local citizens with daily-wage workers for short-term tasks such as cleaning, painting, and gardening. The system includes secure NID-based registration and municipality-admin verification to prevent fake users and ensure trust. Users can post jobs, apply for available work, and rate each other after completion, creating a transparent and reliable digital job-matching ecosystem within the community.

sajilo wear

SajiloWear is a full-stack web application built using PHP, MySQL, HTML, CSS, and JavaScript that allows users to buy, sell, and rent traditional Nepali outfits. The platform includes secure user authentication, profile photo upload, and a dashboard for managing dress listings with pricing, condition, and rental details. The project aims to promote cultural sustainability by encouraging clothing reuse through a community-driven marketplace.
